**注意事項：**

1. 本試題共【5】題，配分共 100 分。
2. 請按順序標明題號作答，不必抄題。
3. 全部答案均須答在試卷答案欄內，否則不予計分。

**1. Q&A :**

- (1) Please explain the meaning of "thermal mass effect"(5%)
  - (2) Please explain the meaning of shading coefficient (SC). (5%)
2. Please explain the environmental factors that affect a person's thermal comfort? (10%)
3. A building has a total cooling load of 500kW. The sensible portion of the load is 378 kW. The space is to be maintained at 25°C db and 50% relative humidity. Outdoor air is at 38°C and 50% relative humidity, and 10% by mass of the air supplied to the space is outdoor air. Air is to be supplied to the space at 18°C. Assume sea level pressure and find:
- (a) The minimum amount of air supplied to the space in m<sup>3</sup>/s (10%)
  - (b) The capacity, apparatus dew point, by pass factor, and SHF of the cooling coil. (10%)
4. A standard vapor-compression cycle developing 100 kW of refrigeration using refrigerant ammonia operates with a condensing temperature of 40°C and an evaporating temperature of 0°C. Calculate (a) the refrigerating effect in kilojoules per kilogram, (b) the circulation rate of refrigerant in kilograms per second, (c) the power required by the compressor in kilowatts, (d) the coefficient of performance, (e) the volume flow rate measured at the compressor suction, (f) the power per kilowatt of refrigeration, and (g) the compressor discharge temperature. (30%)

5. What is the volumetric efficiency of an eight-cylinder Vilter 458XL ammonia compressor operating at 1200 rpm when the saturated suction temperature is 0°C and the condensing temperature is 40°C? The bore and stroke of the compressor are 114 by 114mm. The catalog lists the refrigerating capacity at this condition as 590 kW. (30%)
