

國立臺北科技大學 102 學年度碩士班招生考試

系所組別：3220 環境工程與管理研究所乙組

第二節 統計學 試題

第一頁，共一頁

注意事項：

1. 本試題共 5 題，配分共 100 分。
2. 請標明大題、子題編號作答，不必抄題。
3. 全部答案均須在答案卷之答案欄內作答，否則不予計分。

1. Please explain the followings statistical terms (1) precision (2) accuracy (3) variance inflation factor (4) degree of freedom (5 points each, 20 points total)
2. A new experimental method is developed to test if the result is 50 mg/L or not. Suppose that if $48.5 \leq \bar{x}$ (sample mean) ≤ 51.5 , we will not reject the null hypothesis $H_0: \mu=50$. If the true mean is 52, what is the power of this statistical test? (assuming the standard deviation σ is 2.5 mg/L and the sample number n is 10) (20 points)
3. A statistical program output for a random sample of data is shown below. Some of the quantities are missing. Compute values (X and Y) of the missing quantities. (10 points)

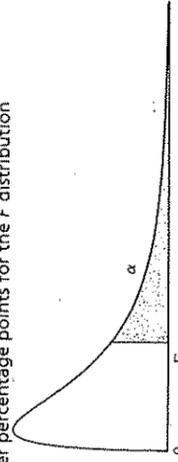

N	Mean	SE Mean (standard error of the sample mean)	StDev (standard deviation)	Variance	Minimum	Maximum
9	19.96	X	3.12	Y	15.94	27.16

4. For a regression model, please explain why sometimes a significant coefficient of determination (r^2) does not mean the model is useful? Could correlation coefficient (r) be negative? Why? (10 points)
5. A residual output from Excel for a simple linear regression is shown in the following. Please find (1) SSE, SSR and SST (2) MSE and MSR (3) R^2 and adjusted R^2 (4) F value (5) T value of T-test for the regressor (x) (6) Standard deviation of the model errors (7) Comment on the significance of the regressor (x) for $\alpha=0.05$ (8) Comment on the significance of the regression for $\alpha=0.05$ (5 points each, 40 points total)
