

國立臺北科技大學九十六學年度碩士班招生考試

系所組別：1203 製造科技研究所

第二節 熱力學 (選考) 試題

第一頁 共二頁

注意事項：

1. 本試題共四題，配分共 100 分。
2. 請標明大題、子題編號作答，不必抄題。
3. 全部答案均須在答案卷之答案欄內作答，否則不予計分。

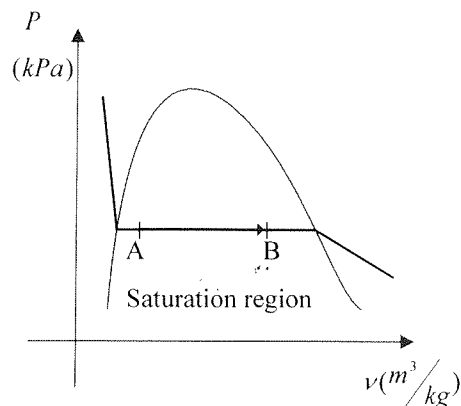

Problem 1

A piston-cylinder device contains 0.03 m^3 of a gas initially at 150 kPa. At this state, a linear spring with a spring constant of 120 kN/m is touching the piston but exerting no force on it. Now heat is transferred to the gas, causing the piston to rise and compress the spring until the volume inside the cylinder triples. If the cross-sectional area of the piston is 0.3 m^2 , please answer the following questions?

- (1) The final pressure inside the cylinder (10%)
- (2) The total work done by the gas (10%)
- (3) The work done against the spring to compress it. (10%)

Problem 2

- (1) Which of followings are intensive properties? (a) temperature (b) volume (c) specific volume (d) entropy (e) enthalpy [複選題，全對方給分] (5%)
- (2) If a system changes from state A to B, as shown in the following figure, which of following are increasing? (a) temperature (b) pressure (c) density (d) quality (5%)

- (3) For saturated water at 250 kPa with $h = 700 \text{ kJ/kg}$, please find the corresponding quality and internal energy (kJ/kg). (10%)

Saturated water—Pressure table

Press., P kPa	Sat. temp., T_{sat} °C	Specific volume, m^3/kg		Internal energy, kJ/kg			Enthalpy, kJ/kg			Entropy, kJ/kg · K		
		Sat. liquid, v_f	Sat. vapor, v_g	Sat. liquid, u_f	Evap., u_{fg}	Sat. vapor, u_g	Sat. liquid, h_f	Evap., h_{fg}	Sat. vapor, h_g	Sat. liquid, s_f	Evap., s_{fg}	Sat. vapor, s_g

Problem 3

A certain pressure cooker has a volume of 5 L, and an operating pressure of 100 kPa gage (the atmospheric pressure is assumed as 100 kPa). Initially, it contains 1 kg of water. Heat is supplied to the cooker at a rate of 1500 W after the operating condition is achieved. Please answer the following questions.

- (a) The operating temperature of the cooker (5%)
- (b) Write down the mass balance equation (5%)
- (c) Write down the energy balance equation (5%)
- (b) The time needed to burn out all water inside the cooker (10%)

注意：背面尚有試題

Problem 4

The schematic for a factitious cycle is shown in the attached figure. It withdraws 250 kJ from a 800K heat source, delivers 100 kJ work, and discharges 150 kJ to a 500K heat sink. Please answer the following questions.

- (1) The efficiency of this cycle (10%)
- (2) The Carnot efficiency of this cycle (10%)
- (3) Is this cycle possible? perfect? or impossible? (5%)
